NOTICE OF AVAILABILITY Devens Reserve Forces Training Area

The U.S. Army announces the preparation and availability of a Finding of No Significant Impact (FONSI) and Programmatic Environmental Assessment (PEA) for the proposed implementation of the Integrated Training Area Management (ITAM) Program on Devens Reserve Forces Training Area (DRFTA) South Post.

Full implementation of the ITAM Program's management activities, routine maintenance, assessments, and repair and rehabilitation of training areas within South Post will include such activities as grass and woody vegetation management and manipulation, maneuver areas and trail repair and development, land rehabilitation, land manipulation, best management practices use, soil and erosion control, training debris removal, storm drainage repair and cleanup, and other similar activities. Assessing these actions programmatically will limit NEPA documentation and improve environmental oversight of these programs by taking a broad look at the ITAM Program.

Documents will be made available for a 30-day public commentary period, from the date of this publication, at the following libraries: Ayer Library, Groton Public Library, and Harvard Public Library. A digital version is also made available during the 30-day public review period by email request to DRFTA Environmental Chief at: zygmunt.v.osiecki.civ@army.mil, or via U.S. Mail to Zygmunt Osiecki, Environmental Division, 30 Quebec St., Box 10, Devens, MA 01434.
